

# How to use our data catalogue

## DataHub metadata catalogue provides insights in collected MUMC+ research data

Using DISCOVER as your starting point, you can search for your favorite gene, protein etc. and look for linked datasets that has been collected by your MUMC+ colleagues. The increase of the amount of data can help you to get novel scientific insights. Due to the fact that all datasets are accompanied by contact information, the catalogue will also allow you to contact the creators of the data to set up new and extend existing collaborations.

### **Search across linked COVID-19 data**

You can also find COVID-19 related data in our DataHub DISCOVER. ONTOFORCE, the provider of DISCOVER, has launched a beta release of DISCOVER COVID-19 Edition, a coronavirus-specific edition that aims to improve the organisation, integration and accessibility of rapidly evolving information related to the COVID-19 pandemic. DataHub worked hard, together with ONTOFORCE, to integrate the COVID-19 data into our local DISCOVER instance, so you can now search across linked COVID-19 data yourself.

You can start your search by simply entering free-text keywords or choosing one of the displayed data categories. You will find the COVID-19 data in the COVID specific categories (COVID publications, COVID patents and COVID clinical trials).
